Dear Paul,

7/15

Thanks for your 7/12 with enclosures. I'll ask Jim if he wants a print, thanks.

He had to phone me today about the interrogatories he's putting into final shape. I had asked him to mail you a xerox of the spectro decision and of the King transcript, last one. He sent me extra. If you do not receive, please let me know. I think you'll find it as intefesting as the carbons may indicate.

I wonder how much of this is comprehensible to those not intimately familiar with all the details.

The Ray thing is crazy. We'll have to see how it works out. He is building a mental record for them to use. I've been working on Jerry the only possible way on this and related questions. Their skulls are concrete and the contents a century out of date.

No word from Schweiker. Or Hart.

It takes much time to do these things. I take the time. Right now I'm a bit not weary but I guess emotionally tired from having made an alaysis of the 1996 transcript for Jim, so I switch from something not that dreary.

You Gordon will not air me. Again, that is. He'll never remember the one time, back in 1967 or 1968. I warned him during a break not to pull the kind of stuff he had been or I'd respond in kind because he'd be leaving me no choice. He didn't heed me. Or as I recall, his wife, who I think is probably his brains. So I clobbered him on his own show. Groden tried to get him to have me on the stuff he did when Gregory started up. He would not. His show is not aired around here. They it originated in suburban Detroit. But thanks.

I think I've carboned you on the Bessie letters. I'll carbon him on that to Dmytryk. I'll want to get my old files back from him.

We are okay. Lil returned from a visit with my mother last night.

As you will have gathered, the legal stuff is going fantastically well.

Have to try to think in advance of their next tactic. One has been forming in my mind. I'll propose it to Jim soon. When I start the adrenalin will flow again.

The FBI is running about 9 months behind on their FOIA/PA responses. They are that overloaded but they do still stall and get wasteful to build statistics.

Best,
